

Transition to University Case Study

Student name:
Amaan Abbasi

School: Ysgol
Dyffryn Conwy

School Address

Nebo Road, Llanrwst, LL26 0SD

University & Programme

London School of
Economics (LSE),
BSc Mathematics
and Economics

What happened after you passed your Further Maths exam?

I received a lot of compliments from my school and course teacher, they appreciated the fact that I had passed as they knew the course is not easy and challenging. I was also very happy when I had passed as I knew I was going to study maths at university.

Do you think that studying Further Maths through FMSP Wales has helped your transition to university?

I definitely agree that Further Maths eased my transition into university, however there are many things now that I have never seen before, that I wish was even briefly shown to me in the FMSP. However overall there are many thing similar in terms of overlap in content and several things new, but I do believe it helped.

Are there any ways that you feel Further Maths specifically helped?

I got the chance to interact with people with similar goals and love for maths. The course content also lead on nicely to that of the beginning of university, which made adjusting to university work-load a bit easier.

Would you recommend studying Further Maths and why?

I would recommend studying further maths to anyone who feels confident with the normal A-level maths that they are doing at school. After noticing that A level maths covers an equal amount of content as normal maths and at a faster pace, I know it can be that not everyone is interested. However, if a person is competent and interested then I would recommend it.
